Agent Performance Report

Evaluation of the AI travel agent on 12 test queries, checking tool use, JSON structure, itinerary completeness, and budget math.

1. Summary

Metric	Value
Total test cases	12
Completed	0
Passed	0
Failed (including errors)	0
Pending	12
Average response time	-

Note: Tests were run in batches because the Groq free tier has a daily token limit. Pending tests will be added after the limit resets.

2. Evaluation Method

- json_valid: the agent returned valid JSON (parsing succeeded).
- all_sections_present: trip_summary, flight, hotel, weather, itinerary, budget, and messages are all present.
- itinerary_days_filled: every day in the itinerary has at least one place.
- budget_within_limit: the total cost is at or below the user's budget (N/A for the invalid-city test).
- budget_math_correct: flight + hotel + local expenses equals the total.
- A test passes when it has no error and every applicable check is Pass.

3. Test Results

ID	Test name	Time (s)	JSON	Sections	Itinerary	Budget limit	Budget math	Result
T01	Basic Goa trip, cheapest flight	-	-	-	-	-	-	Pending
T02	Two travellers, fastest flight	-	-	-	-	-	-	Pending
T03	Return flight included	-	-	-	-	-	-	Pending
T04	Over-budget trip (should warn)	-	-	-	-	-	-	Pending
T05	Hotel amenity filter (pool)	-	-	-	-	-	-	Pending
T06	Interests: temple and museum	-	-	-	-	-	-	Pending
T07	Kolkata trip, no interests	-	-	-	-	-	-	Pending
T08	Jaipur trip, fort and monument	-	-	-	-	-	-	Pending
T09	Strict star filter (5 stars)	-	-	-	-	-	-	Pending
T10	Extra requirement: vegetarian food	-	-	-	-	-	-	Pending
T11	Mumbai trip, 4 days	-	-	-	-	-	-	Pending
T12	Invalid city (should refuse or explain)	-	-	-	-	-	-	Pending

4. Errors Observed

No errors recorded in completed tests.

Groq rate limit errors (429) mean the daily token limit was reached. These are not agent failures.

5. Observations

Observations will be filled in after all 12 tests are complete. Points to look for: whether over-budget trips are flagged clearly, whether interest filters are followed, and whether invalid cities are handled gracefully.

6. Improvements Made During Development

- Tool outputs shortened to 5 items to reduce token use.
- Places search limited to one call per plan to avoid repeated tool calls.
- Itinerary fallback added: when interests have too few places, top-rated places fill the days, with a note.
- Hotel fallback added: closest alternatives shown when no hotel matches exact filters.
- Strict rule added: flights are one-way unless both legs are searched.
